Complaint Counsel's

EXHIBIT B

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
(Soderman, Tr. 9347:8-9348:11);	 23 produce? 24 A. Yes, our test times would be reduced for 25 similar reasons. We would not have to test against
(d) it would interfere with a manufacturer's ability to speed grade parts (Soderman, Tr, 9348:12-9349:15);	 page 6627 1 different burst lengths and CAS latencies and repeat 2 the entire test for them. 3 Q. Based on your understanding at that time, what, 4 if any, were the disadvantages of SDRAM-Lite?
(e) it would add expense due to decreased die yield (Geilhufe, Tr. 9577:1-9578:9)	6 disadvantages other than at that time there was still7 some discussion as to which was the best burst length8 and which was the best CAS latency.
	 Trial vol 33 (Lee) page 6633 14 Q. Now, based on your assessment at that time, was 15 use of a fixed CAS latency acceptable from a technical 16 point of view? 17 A. Yes. 18 Q. Again, based on your assessment at that time, 19 was use of fixed CAS latency acceptable from a cost 20 perspective? 21 A. Yes. 22 Q. Based on your assessment at that time, was use 23 of fixed burst length acceptable from a technical point 24 of view? 25 A. Yes. page 6634 1 Q. And based on your assessment at the time, was 2 use of fixed burst length acceptable from a cost 3 perspective? 4 A. Yes. Trial vol 33 (Lee) page 6781 21 Q. And then if I could ask you to look at the 22 fourth bullet point, it reads, "Vendor testing at 23 multiple latencies for a given operating frequency

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
Expert Testimony To Be Covered In Rebuttal	 Topics In Question 24 unnecessary cost." 25 Again, could you please explain your page 6782 1 understanding as of the March 2000 time frame of what 2 was conveyed by that bullet point? 3 A. Sure. What he was conveying was that as a 4 manufacturer, we had to test all combinations of 5 frequency and latency, a similar concern we had all the 6 way back to the SDRAM-Lite days, and I testified to 7 that earlier. So, he was saying this adds costs for us 8 to test this if it's not being used and that, 9 therefore, it would be unnecessary. 10 Q. If I could ask you to turn to the next page, 11 page 4, again with a caption Avoiding Programmable 12 Latency in SDR/DDR SDRAMs, and the top bullet point 13 reads, "One approach: offer devices with a fixed read 14 latency." 15 Do you see that? 16 A. Yes. 17 Q. Can you please explain your understanding at 18 the time of what was being proposed here? 19 A. Yes. What was being proposed was that there 20 would be one latency but not be programmable. 21 Q. So, in other words, that would be a fixed 22 latency? 23 A. Correct. 24 Q. If I could ask you to turn, please, to page 6 25 of CX-2758. Again, under the caption Avoiding page 6783 1 Programmable Latency in SDR/DDR SDRAMs, the first 2 bullet point on page 6 reads, "Another approach:
	 offer 3 devices with programmable operating frequency; each 4 operating frequency range has a fixed read latency 5 associated with it."

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 6 Can you please explain your understanding at 7 the time of what was meant by that paragraph? 8 A. Yes. My understanding was that the proposal 9 was to have a programmable frequency instead of a 10 programmable latency, and for a given operating 11 frequency it would it would have a latency 12 associated with it.
3. use of fixed burst length parts is difficult	

and costly because

(a)

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
separate parts (Geilhufe, Tr. 9601:7-16)	
5. use of fixed CAS latency would not permit the mode register to be removed from the DRAM (Geilhufe, Tr. 9736:24-9737:19)	Trial vol 33 (Lee) page 663723Q. Based on your understanding at the time that 24 you were reviewing and discussing this document in late251995, did you understand that page 9 of CX-260 page 66381explicitly explained how CAS latency would be 2 determined in a future SDRAM standard?3A. Yes.4Q. And what was your understanding of how page 95proposed to determine the CAS latency of the future 6 SDRAM standard?7A. The last sentence of the paragraph discusses 8 the mode register, so it would be programmable through9the mode register just like the SDRAM device, and 10 specifically called out that there were fields 11 available for that.Trial vol 33 (Lee) page 664021Q. If I could ask you, please, to turn to page 7 22 of JX-40, and I'd like to direct your attention to the 23 paragraph appearing underneath heading 8.1 towards the 24 bottom of page 7. It's the paragraph that carries over 25 to the top of page 8. The caption reads, page 6641 1 "JC-42.3-97-62B, DDR Mode Register Modification Item 2 815.02C."3Do you see that paragraph? 4 A. Yes.4A. Yes.5O. Is this one of the paragraphs that you reviewed

Con Proj Exp Cov	pplaint Counsel's posed List Of Rambus ert Testimony To Be ered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
		 page 6788 1 multipin case, instead of using the mode register, the 2 DC level of a pin coming into the device could be used 3 to detect which latency to operate at, and also in one 4 form of the proposal, whether to use posted or normal 5 CAS operation.
6. (b)	(a) electrically blownfuses and anti-fuses arenot reliable (Soderman,Tr. 9356:18-9357:2);based on a survey of	 Trial vol 2 (Rhoden) page 427 14 Q. If I could direct your attention to the next 15 page, the bottom of page 71, and the last line of that 16 slide reads, "Fuse option for serial and interleaved 17 wrap mode."
	"maybe 50" out of "hundreds" of data sheets, only about 2 out of 50 SDRAMs appear to incorporate electrically blown fuses (Soderman, Tr. 9357:3-9358:1);	 18 Do you see that? 19 A. Yes, at the bottom of the page, I see. 20 Q. What was Samsung proposing with respect to the 21 fuse option for serial and interleaved wrap mode? 22 A. Samsung was proposing using a fuse option to 23 actually select between the type of burst mode, whether
(c)	anti-fuse technology is not generally available in DRAMs (Geilhufe, Tr. 9582:20-9583:19; Tr. 9732:11-9734:21);	 24 it was interleaved burst mode or whether it was 25 sequential burst mode, and it's not important, but page 428 1 the which one is which, just that they were two 2 different modes of operation of the device, and they 3 were proposing for selecting between those two 4 different burst options. They were proposing using a
(d)	the use of laser blown fuses would lead to reduced yield due to speed distribution (Geilhufe, Tr. 9585:21-9586:9)	 5 fuse to do that. 6 Q. How would a manufacturer use a fuse to select 7 between those options? 8 A. Well, a fuse is a pretty common 9 MR. DETRE: Objection, Your Honor. We have had 10 no foundation that the witness is expert in any kind of 11 manufacturing. It's not clear to me whether he's still 12 recalling now or 13 JUDGE McGUIRE: Overruled. I'll entertain

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 19 electrical fuses blown at test or we could use a fuse 20 that was, say, a laser fuse, something that was broken 21 by some other means. The fuse would establish the 22 operating mode either at the very end of the 23 manufacturing process or during the test process. 24 Q. Would it be fair to say then that two or more 25 burst lengths would be designed into the part? page 5131 1 A. Yes, it would. 2 Q. And then how would the ultimate burst length 3 then be determined? 4 A. We would set an operating mode via the fuses 5 and that operating mode would be fixed. 6 Q. In other words, by blowing one or more fuses, 7 that would determine which of the designs you would 8 actually use in the feature? 9 A. That is correct. Trial vol 25 (in camera) (Macri) page 4763

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question

		 multipin case, instead of using the mode register, the DC level of a pin coming into the device could be used to detect which latency to operate at, and also in one form of the proposal, whether to use posted or normal CAS operation. Q. Now, how, if at all, did this proposal differ from the proposal of March 2000, CX-2758, that we looked at a moment ago? A. In this proposal, he's suggesting using an external pin to control it with a level. In the prior proposal, there was there was really two proposals. There was just have a fixed latency, and then the other one was to program frequency.
(b)	it would be necessary to add pins (Geilhufe, Tr. 9724:16-21;9741:8-974 2:1; Soderman, Tr. 9362:12-9363:3)	Trial vol. [7] (Su80151 2p

Complaint Counsel's Proposed List Of Rambus

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 23 Do you see that? 24 A. Yes. 25 Q. And again, what were you proposing here? page 6798 1 A. This was kind of the conclusion andy 2 recommendation based on the proposal that we eliminate 3 strobes and we go with single data rate clocks with a 4 different clocking scheme, which is described inside 5 the document. 6 MR. OLIVER: May I approach, Your Honor? 7 JUDGE McGUIRE: You may. 8 BY MR. OLIVER: 9 Q. Mr. Lee, I've handed you a document marked 10 CX-426. Do you recognize this document? 11 A. Yes. 12 Q. What is this document? 13 A. This is an email chain, but essentially it's 14 the meeting minutes from a conference call, a JEDEC 15 task group, to look at the clocking proposal that I had 16 proposed earlier. 17 Q. And did you participate in this conference 18 call? 19 A. Yes. 20 Q. And can you please explain in general terms the 21 results of this conference call? 22 A. Sure. We analyzed technical details of the 23 proposal, further explanation, discussed some concerns 24 and some analysis and tried to identify different 25 companies' preferences for this scheme and kind of what page 6799 1 to do next. 2 Q. Now, based on your recollection, do you recall 3 whether there was any consensus as to whether a single 4 data rate clock was technically feasible?
	5 A. 108, 1100all.

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
Covered In Rebuttal	 6 Q. And what was your recollection? 7 A. It was generally considered feasible by most of 8 the companies but not all. 9 Q. Now, do you have a recollection as to whether 10 there was a consensus from the call in terms of what 11 should be done next? 12 A. Yes, I recall. 13 Q. And what is your recollection? 14 A. We felt there was still a little further work 15 that needed to be done, and we were going to try to 16 explore the idea a little bit further, and we were 17 going to prepare a summary at the next JEDEC meeting on 18 the progress of our call. Trial vol 33 (Lee) page 6802 12 Q. Now, based on your understanding at the time, 13 this would be the late 2000 to early 2001 time frame, 14 what was your understanding of the advantages of using 15 a single edge clock in the DDR2 standard at the time? 16 A. The advantages of a single edge clock? 17 Q. Yes. 18 A. For DDR2? There were several that were listed 19 in my original presentation, but they included we 20 felt it would have been easier to test using that and 21 not having a burst through strobe. We felt that we 22 would gain some benefits in the timing budget by not 23 having to worry about duty cycle control of the dual 24 edge clock. 25 Q. Now, focusing on the late 2000, early 2001 time page 6803 1 frame, what was your understanding at that time of the 2 potential disadvantages to using a single edge clock in
	3 the DDR2 standard?4 A. One of the challenges was to get adequate data

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 5 rate or get a high enough clock frequency using a 6 single edge clock. Perhaps the biggest disadvantage 7 was that it wasn't like DDR, and so it didn't have a 8 direct migration path. That was fed back to us from 9 some customers. 10 Q. Can you please explain in more detail your 11 understanding of why it was a disadvantage that using a 12 single edge clock in DDR2 was not like DDR? 13 A. Sure. There was concern that it would be 14 difficult to design a controller that would support DDR

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 companies? A. Yes. Q. What is the purpose of the PLL in the QBM module? A. Again, it's a it provides the various clocks that are required in the technology, at 1x, 1x90 and 2x. Q. Is the \$2 the initial cost? A. No, it will be slightly higher at launch, but we expect it to come down pretty rapidly in cost. Q. Do you have an expectation for at what volume that would occur? A. No, again, just we expect QBM to be in high volume fairly rapidly. Q. What do you mean by "high volume"? A. Again, the marketplace is very large, and we're looking at, you know, getting some type of market share that would immediately put us into a high-volume category.
9. moving the DLL to the module would cost \$3.80 for the DLL (Geilhufe, Tr. 9613:13-25)	 See above. Also, see Trial vol 33 (Lee) page 6646 23 Q. If I could direct your attention to the first 24 bullet point, Disadvantages of DLL, and then underneath 25 that, it reads, "Start-up time after power-up, after page 6647 1 exiting self-refresh, and after changing operating 2 frequency." 3 Do you see that? 4 A. Yes. 5 Q. Can you please explain your understanding at 6 the time that you reviewed this of that bullet point? 7 A. Sure. DLL, the way it works, it takes a 8 certain amount of time to lock, what we call lock. You 9 can consider it like a warm-up time for a car or 10 something. And after certain operations or upon 11 power-up, it took a certain amount of time before DLL 12 was guaranteed to be accurate.

Complaint Counsel's

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question		
10 SI DR AM was unable	 14 five components of the of variation of data valid 15 windows that Mr. Ryan outlined on page 20 of JX- 29, and 16 focusing again on your understanding in the 1996 time 17 frame, what was your understanding of which, if any, of 18 these five components would be corrected for or 19 improved by an on-chip DLL? 20 A. The on-chip DLL would primarily improve 21 component number 3, which he's called chip-to-chip 22 skew. It would just improve the certainty of time in 23 which the data was output onto the bus from the DRAM 24 relative to the clock coming in. 25 Q. Now, again, based on your understanding in the page 6664 1 1996-1997 time frame, what, if any, effect would an 2 on-chip DLL have with respect to the to bullet 3 points 1, 2, 4 and 5 of Mr. Ryan's presentation? 4 A. It really wouldn't impact those. 5 Q. Now, in Mr. Ryan's presentation, what 6 technology, if any, was Micron proposing to help solve 7 the variation of the data valid window problem? 8 A. I think at this time he was primarily proposing 9 the use of echo clocks, which was a technique described 10 earlier where we're converting the problem of absolute 11 timing variance to relative timing variance. 		
to design a high speed DRAM using Vernier			

-

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question	
	 Q. Yes, thank you, it would refer to the bus structure, the devices and the interface. A. Okay. SyncLink architecture was kind of a combination between the narrow bus and wide bus. was in between the width of a DsceRus and wianktf a 	

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question		
Expert Testimony To Be Covered In Rebuttal	 Topics In Question 2 open drain driver. They're quite a bit different. 3 SyncLink used these verniers for aligning when 4 data would be put onto the bus. Rambus didn't do 5 anything like that. They relied on the loop back clock 6 for providing the timing of when to put the data on the 7 bus. 8 There were many differences in the protocol and 9 the bank organization and things like that as well. Trial vol 33 (Lee) page 6667 13 In the 1996 or 1997 time period, were you 14 familiar with the concept known as vernier? 15 A. Yes. 16 Q. Again, focusing on your understanding at that 17 time, can you please explain what your understanding of 18 the vernier method was? 19 A. Sure. The vernier is you can consider it an 20 adjustable delay element, so the way we would use it, 21 it was one of the tools we liked to use to solve this 22 timing uncertainty problem, is if the timing varied, 23 you could use the vernier adjustable delay to 24 compensate for that. So, if the timing increased, you 25 could use less delay, and if the timing decreased, you 25 could use more delay, so the loop delay was constant. 2 And so providing that constant loop delay 3 created a less timing uncertainty and a larger data 4 valid line back at the controller, and this was a 		
	Trial vol 33 (Lee) page 6675 25 Q. Now, Mr. Lee, focusing on the 1996 and 1997 page 6676 1 time period, did vou give any consideration during		
	 that 2 time period as to whether a vernier method could be 3 used to improve capture of data at the memory 4 controller? 		

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question	
Covered III Kebuttai	 5 A. Yes. 6 Q. And based on your understanding at that time, 7 could a vernier circuit have been used in place of an 8 on-chip DLL to facilitate capture of data at the memory 9 controller? 10 A. Yes. 11 Q. Could you please explain your understanding at 12 that time of how a vernier method could have been used 13 to do that? 14 A. Sure. There's really a couple places we could 15 have put a vernier to solve the timing uncertainty of 16 data coming out of the DRAM, which is what the DLL was 17 trying to address. One is we could have put it in the 18 DRAM itself, and as the delay started to increase, we 19 could reduce the delay the number of delay 	
	 20 in the vernier inside the DRAM to offset that so that 21 there was a more constant output data time. 22 The other thing we could do is we could put it 23 in the controller itself, and as the delay coming of 	

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question
	 13 DLL, that might be easy for me to contrast it. While 14 they both had the disadvantages of some power and 15 size utilization, with the vernier, we didn't have this 16 lock time problem. We didn't have to wait for it to 17 lock. 18 And also, we felt that with the vernier, we 19 could put it on the controller so it didn't have to be 20 replicated on every DRAM, and by doing that we 21 reduce the cost and complexity. 22 Q. Now, compared with using on-chip PLL or on-chip 23 DLL, based on your understanding at that time, did you 24 understand there to be any disadvantages with using 25 vernier rather than on-chip PLL or DLL? page 6678 1 A. I would say the disadvantages were similar, as 2 I mentioned, to the DLL with power and die size if it 3 was included on the DRAM. I think there was probably 4 more familiarity in the DRAM business with DLL than 5 vernier, but other than that, there's no disadvantage. 6 Q. Now, based on your understanding at that time, 7 did you regard use of the vernier method to be an 8 adequate substitute for use of an on-chip PLL or 9 on-chip DLL from a technical point of view? 10 A. Yes. 11 Q. And again, based on your understanding at the 12 time, did you regard use of the vernier method to be an 13 acceptable alternative to on-chip PLL or DLL from a 14 cost perspective? 15 A. Yes.
11. because the proposed alternatives didn't include circuit designs,	

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal		Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question	
12.	they were poorly thought out (Geilhufe, Tr. 9673:17-9674:5) DDR II (a) expands the use of programmable CAS latency (Soderman, Tr. 9351:7-9353:3)	Trial vol 33 (Lee) page 6785 5 Q. Mr. Lee, if I could ask you to turn, please, to 6 the next page, page 9, and here there's a the 7 caption The real problem: DDR II hold on just a 8 minute.	

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question		
	 19 you had with counsel or excluding any excluding any 20 discussions following instructions from counsel, did 21 you have any discussions between March and July of 2000 22 as to whether Micron should present a second time its 23 proposal to use a fixed CAS latency at JEDEC? 24 A. Not regarding fixed CAS latency. 25 Q. Did you have any discussions between March and page 6793 1 July of 2000 as to whether Micron should repeat the 2 proposal it made to JEDEC of March 2000? 3 A. I had a discussion with Kevin related to what 4 he felt should happen. 5 Q. Now, as part of that, did you also did you 6 provide a recommendation as to whether you thought 7 Micron should repeat its March of 2000 presentation? 8 A. I didn't make a recommendation. 9 Q. Did you have a belief at that time as to 10 whether Micron should repeat its March of 2000 11 presentation? 12 A. I did. 13 Q. What was your belief at that time? 14 A. Based on Kevin's report of how the first 15 showings went, my belief was that there was no 16 opportunity there to be able to change that at JEDEC. 		
 (b) initially planned to use a single burst length, but subsequently reverted to programmable burst length (Soderman, Tr. 9369:12-23) 	 Trial vol 33 (Lee) page 6779 7 Q. Mr. Lee, if I could ask you to turn to page 2 8 of CX-2758, the first bullet point on page 2, "The 9 objective of this presentation is to propose an 10 approach for reducing the complexity and cost 11 associated with read latency operation described in the 12 current DDR II specification." 13 Do you see that? 14 A. Yes. 		

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question		
Covered In Rebuttal	 MR. OLIVER: Your Honor, and I will have a question after this. BY MR. OLIVER: Q. The second bullet point reads, "The first part of the presentation discusses possible methods for eliminating programmable read latency from existing SDR and DDR devices; this discussion serves as useful background for the DDR II proposal." Mr. Lee, what I'm trying to understand is that on the cover, it refers to DDR2, and yet here on page 2, it makes reference to SDR and DDR as well as DDR2, page 6780 and actually, let me ask one clarification question first. The reference to SDR on page 2, that refers to the SDRAM standard. Is that right? A. Yes. Q. And what I'm trying to understand is whether this presentation was directed at the SDRAM and DDR SDRAM standards as well as DDR2 or was it directed just at the DDR2 standard? A. It was directed at all three. Q. If I could ask you to turn, please, to page 3, and under the caption Avoiding Programmable Latency in SDR/DDR SDRAMs," the second bullet point reads, "Users Users Q. Can you please explain your understanding at the time of what was meant by that bullet point? 		
	 they were using the device, they would try to operate at a CAS latency that was the lowest acceptable for that clock rate given the device capabilities. 		

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General

 5 frequency and latency, a similar concern we had all the 6 way back to the SDRAM-Lite days, and I testified to 7 that earlier. So, he was saying this adds costs for us 8 to test this if it's not being used and that, 9 therefore, it would be unnecessary. 10 Q. If I could ask you to turn to the next page, 11 page 4, again with a caption Avoiding Programmable 12 Latency in SDR/DDR SDRAMs, and the top bullet point 13 reads, "One approach: offer devices with a fixed read 14 latency." 15 Do you see that? 16 A. Yes. 17 Q. Can you please explain your understanding at 18 the time of what was being proposed was that there 20 would be one latency but not be programmable. 21 Q. So, in other words, that would be a fixed 22 latency? 23 A. Correct. 24 Q. If I could ask you to turn, please, to page 6 25 of CX-2758. Again, under the caption Avoiding page 6783 1 Programmable Latency in SDR/DDR SDRAMs, the first. 2 bullet point on page 6 reads, "Another approach: offer 3 devices with programmable operating frequency; each 4 operating frequency range has a fixed read latency 5 associated with it." 6 A. Yes. My understanding was that the proposal 9 was to have a programmable frequency instead of a 10 programmable latency, and for a given operating 11 for the time of what was meant by that paragraph? 8 A. Yes. My understanding was that the proposal 9 was to have a programmable frequency instead of a 10 programmable latency, and for a given operating 11 frequency it would it would have a latency 12 associated with it. 	Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal	Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question		
		 frequency and latency, a similar concern we had all the way back to the SDRAM-Lite days, and I testified to that earlier. So, he was saying this adds costs for us to test this if it's not being used and that, therefore, it would be unnecessary. Q. If I could ask you to turn to the next page, page 4, again with a caption Avoiding Programmable Latency in SDR/DDR SDRAMs, and the top bullet point point Bo you see that? Do you see that? A. Yes. Q. Can you please explain your understanding at the time of what was being proposed here? A. Yes. What was being proposed was that there would be one latency but not be programmable. Q. So, in other words, that would be a fixed latency? A. Correct. Q. If I could ask you to turn, please, to page 6 of CX-2758. Again, under the caption Avoiding page 6783 Programmable Latency in SDR/DDR SDRAMs, the first bullet point on page 6 reads, "Another approach: offer devices with programmable operating frequency; each Q. Can you please explain your understanding at the time of what was meant by that paragraph? A. Yes. My understanding was that the proposal was to have a programmable frequency instead of a programmable Latency, and for a given operating 1 frequency it would it would have a latency 		

Complaint Counsel's Proposed List Of Rambus Expert Testimony To Be Covered In Rebuttal		Pages In Trial Testimony By Mr. Lee And Other Fact Witnesses Where They Testified On The General Topics In Question	
(c)	limits the use of the burst terminate command because of timing difficulties (Soderman, Tr. 9376:19-9377:20)	Mr. Macri, one of Complaint Counsel's witnesses, testified to this exact point during direct examination (prior to the testimony of both Professor Jacob and Mr. Lee). Complaint Counsel could have asked the later witnesses to address the issue. e.8j 210.126testd te.8j 210.12	126e.5:6 (Macri)
