14	FEDERAL TRADE COMMISSION JEWELRY GUIDES ROUNDTABLE JUNE 19, 2013 Federal Trade Commission 601 New Jersey Avenue, N.W., Conference Center Washington, DC Reported By: Stephanie Gilley	$\begin{array}{c} 4\\ 5\\ 6\\ 7\\ 8\\ 9\\ 10\\ 11\\ 12\\ 13\\ 14\\ 15\\ 16\\ 17\\ 18\\ 19\\ 20\\ 21\\ 22\\ 23\\ \end{array}$	UELCOME NS. REENAH KIM: Good morning everyone and welcome. I think we might as well go ahead and get started. Thank you all for coming to today's public youndtable on the FTC's Jewelry Guide. My name is Reenah Kim and this is Laura Kim with me. We are all attorneys morning's panels. We are looking forward to a productive discussion with today's group. First, I'm just going to go over a few housekeeping items, starting with security. Anyone who leaves the building without an FTC badge will be required to go back through security screening before rentering the conference center. In the event of a fire or evacuation, please leave the building in an orderly fashion. Once you're starts out front and to the right. So once you're there, please check in with the person bia is accounting for everyone in the conference center. In the event that it's safer to remain in	
7 8 9	2 FEDERAL TRADE COMMISSION INDEX Session Page Welcome, Reenah Kim 3 Panel 1 3 Panel 2 77	$\begin{array}{c} 2\\ 3\\ 4\\ 5\\ 6\\ 7\\ 8\\ 9\\ 10\\ 11\\ 12\\ 13\\ 14\\ 15\\ 16\\ 17\\ 18\\ 19\\ 20\\ 21\\ 22\\ 23\\ 24\\ \end{array}$	4 the building, you'll be directed where to go. If you spot any suspicious activity, please alert security. And lastly, this event may be photographed, videotaped, or otherwise recorded. By participating in this event, you're agreeing that your image and anything you say or submit may be posted indefinitely at the FTC.gov website or on one of the commission's publicly-available social media sites. Now some of you may have attended an FTC roundtable in the past, so are probably familiar with how this will go. As I mentioned, this proceeding is being transcribed, so all of our statements will be on the record and the transcript will be made available on the FTC's website. That said, this will be a relatively informal discussion. We have panelists here at the front and we also have a number of folks, I know, who are interested in weighing in, sitting in our audience right now. So we will the way this will proceed is that we will sort of throw out questions and we'll have panelists speak up. If you're a panelist and you wish to speak, it's a small enough space, you can kind of just put	1

1 your hand up and we will invite you to join in. The

2 purpose of that being simply so we can have a clear

3 transcript and minimize any interruptions.

4 We will also be reserving time at the end

5 of each panel for Q&A from folks in the audience.

6 And so at that time, if you're someone in the

7 audience who would like to speak, you know, the same

8 thing. You can just put your hand up and we will

9 call on you to make sure you get a chance to be

10 heard.

11 Please keep in mind this roundtable is not

12 intended to be a protracted debate or oral argument.

13 Nothing is going to be decided today. And while

14 Laura and I will try to answer questions if they

15 arise, the purpose of the meeting is really not for

16 FTC staff to provide detailed responses. Nothing is

17 going to be decided today. What we say does not

18 necessarily reflect the views of the Commission or

19 any individual commissioner.

20 Our main objective is to guide the

21 discussion to identify issues and further develop

22 the record, as the FTC reviews and considers

23 possible revisions to the Jewelry Guides. As you

24 know, last summer the FTC sought comment on the

25 overall costs, benefits, necessity, and impact of

6

1 the Jewelry Guides, as well as any possible

2 modifications, as part of the Agency's systematic

3 review of its current rules and Guides.

4 To address some of the comments that we

5 received, we are conducting today's roundtable to

6 explore two particular issues. Our first panel will

7 discuss the marketing of alloy products containing

8 precious metals in amounts below the Guide's minimum

9 thresholds.

10 We'll take a short break and then for our

11 second panel, we will turn to the issue of jewelry

	9		11
1	descriptive marketing materials? Cecilia, do you	1	whatever new technology gets created on how to mark
2	want to start off?	2	a piece of jewelry. And our suggestion, again, from
3	MS. GARDNER: Yes, thank you. First of	3	this broad array of industry experts and
4	all, good morning everyone. Secondly, I'd like to	4	stakeholders, was that if we were to if the FTC
5	thank the FTC for the opportunity to appear here	5	were to permit alloys with lower than minimum
6	today.	6	standards of precious metals, you know, we're for
7	I want to remind everybody, as we have	7	that. And we also think that common sense, reason,
8	said in our submissions, that the Federal Trade	8	and in the interest of consumer preventing
9	Commission guidelines for the jewelry industry is a	9	consumer deception, that the industry should be able
10	very important document to the jewelry industry for	10	to freely describe what it is that they're producing
11	two reasons. It provides our marketers with very	11	and what it is that a consumer is considering
12	clear guidance on what would be deceptive trade	12	
13	practices, and we are interested in ensuring that we	13	But we think that the way that that has to
14	do not engage in consumer deception in any way.	14	be identified should be distinct from the fine
15	And secondly, the Guides are very		jewelry products that meet the minimum standards of
16	•	16	10 karat. And by the way, this wide array of
17	marketers as to what specifications they should meet	17	industry associations and experts all committed
18	in connection with manufacturing and marketing our	18	
19	1	19	being 10 karat to be able to call it fine jewelry,
20	So we continue to emphasize that the	20	e
21	Guides themselves are an important document to our	21	But we do think that the way that these
22	industry and we are very glad that and we hope	22	are identified, marked, described out to be these
23		23	lower than minimum standard alloys should be
24	2 2	24	6
25	It's important to us.	25	jewelry. So our suggestion was to disclose the
	10		12
1	I want to also clarify something. You've	1	amount of precious metal in these alloys freely, you
2	been calling it the JVC response and we're fine with	2	
3	that; however, I want you to be clear about the	3	ahead and freely describe what's in them, including
4			the amount of precious metal, but do it in a
5	submissions were provided to the FTC.	5	percentage as opposed to parts per thousand or
6	We basically had two work streams. One	6	karatage, because that is a distinct way to describe
7	was within our board, we solicited views of the many	7	these metals, number one.
8	sectors represented by the members of our Board of		Number two, it is understandable across
9	Directors. But we also had a very open process	9	the array of the metals you know, silver is often
10	1 1	10	described in parts per thousand, platinum as well.
11	with us, and individual companies, and even	11	Gold is often not described in parts per thousand,
12		12	
13	all of the questions that the Federal Trade	13	way to describe it.
14		14	And we think that the predominant metal
15 16			ought to come first. If you're going to you know, you're free to describe all of the elements,
10	So it's important for you to know that		-
17	what we've been calling the JVC really represents a very broad-based and very inclusive process where we	17	all of the components of the alloy. You don't have to, we just think you must describe the percentage
10 19	took inputs from a wide variety and a wide array of	10	of the precious metal in the item. But if you're
20	industry experts and stakeholders from every sector	$\begin{vmatrix} 19\\20 \end{vmatrix}$	going to describe all the metals in the item, you
20	of the industry. So I wanted to make that perfectly		have to put the predominate one first, so that a
21		$\begin{vmatrix} 21\\22 \end{vmatrix}$	
22	Now your first question pertained to what	$\begin{vmatrix} 22\\23 \end{vmatrix}$	And then we also think it would be very
23 24			important not to stamp the item. And that
	stamping or embossing or engraving or lasering or		particular you know, what we felt was that based
	sumpling of embodoling of englishing of moeting of	1 23	rundani jou know, what we foll was that based

- 1 on our research with consumer perception data, we
- 2 understood that consumers ascribe certain value or a
- 3 certain level of preciousness, if I may use that
- 4 word, to items of jewelry that have the stamp in
- 5 them, identifying the quality.
- 6 So that we felt -- we strongly felt, this
- 7 whole group felt that it was important not to permit
- 8 the quality content of the item to be stamped in the
- 9 jewelry. So for instance, if you're marketing a
- 10 metal like this with a lower than minimum amount of
- 11 precious metal in it, and you wish to stamp it with
- 12 a name like "Celebration" or something, that's fine.
- 13 But not the percentage of the precious metal in the 14 item.
- 15 So those were our suggestions in this
- 16 regard.
- 17 MS. REENAH KIM: And is there a -- I
- 18 understand that that's a component of the proposal
- 19 that JVC submitted on behalf of -- or as part of its
- 20 working group in its process, but what I'd like to

- 1 this is something that has to -- and I use regulated
- 2 in the loose sense of the word. And we think there
- 3~ ought to be some way for the consumer to know what
- 4 it is they are buying.
- 5 And we would have to educate consumers to

Jumping back to Ewa's point, you mentioned that
 there might be, for example, just an understanding

1 also clearly let the customer know exactly what they 2 were purchasing if we used percentages and not a 3 mark for below FTC minimum standards, okay? 4 And in terms of customer understanding, I 5 think in all cases it is important to educate the customer. And we have a vast number of customers 6 7 and products that are marked with karat stamps, 8 bridal in particular, you know, really washes across 9 the industry. I believe that the karat mark is 10 clear. And of course there's always the opportunity 11 to make it more clear. 12 I think the distinction between alloys 13 that are lower than the FTC requirements at this 14 time is the lack of a mark. You know, that's the 15 distinction. Marking the quality of the metal, the 16 purity of the metal for minimum standards going up, 17 and not marking going down, which then I would 18 surely assume that we would have the items sold and 19 delivered to the customer with a description. And 20 that might be one of the key elements in making sure 21 that the customers are clear about the content. 22 MS. REENAH KIM: Ewa? 23 MS. ABRAMS: I query whether percentage 24 content even is necessary in these thresholds below 25 the current Guides, where we can simply describe the

30

1 item as metal, a mixed metal alloy or something

2 similar. And just simply indicate, maybe as Cecilia

3 suggested, from the most predominant metal to the

4 least predominate metal, the elements that are

5 included in that alloy.

6 So that rather than including percentages,7 to your point, that that could simply confuse the8 situation.

9 MS. REENAH KIM: So to clarify Ewa, for

10 below standard alloys, it would simply -- it would

11 be described as, this is a mixed metal alloy

12 including, and let's say gold was 20 percent --

13 MS. ABRAMS: Yeah.

14 MS. REENAH KIM: -- including gold,

15 silver, and base metals, but you wouldn't specify16 the amounts?

17 MS. ABRAMS: Yes.

18 MS. GARDNER: I think that's very

19 dangerous.

20 MR. LEE: I don't think that's --

21 MS. REENAH KIM: And I would -- okay, so

22 that is a suggestion. I think, you know, our

23 concern is that if you don't include an amount, is

	33		35
1	might have been more one metal than another. But at	1	universe of the below standard alloys. To what
2	worst, I would think that maybe there's 25 percent	2	
3	• • •	3	MS. BROOKS-PIKE: They're all I'm
4		4	•
5		5	MS. REENAH KIM: Thank you. The below
6		6	standard products, to what extent would adopting the
7		7	sort of, you know, the nutritional label approach,
8	• •	8	in terms of listing all the components, to what
9		9	extent does that benefit consumers or conversely
10	else that they understand, okay? Just as we do	10	lead to potentially more risk of consumer confusion?
11	today with juice, people can look on the back and	11	So for example, if you have a product,
12	say, well, it's got 2 percent cherry juice in it, so	12	would there be any difference in a consumer's
13	I'll make my decision based on that.	13	perception of value and quality if it is described
14	MS. REENAH KIM: Lisa?	14	simply as, contains 33 percent gold or the
15	MS. BROOKS-PIKE: I think if we leave out	15	description says contains 33 percent gold and 67
16		16	percent brass and copper. Charles?
17	think we need to know all of them.	17	MR. WAGNER: Again, I feel like we are
18		18	somewhat disarmed in the fact that we have not
19		19	conducted consumer research, but we do have lots of
20	1 1 5 5	20	e
21		21	When you think that 10 karat gold is less
22	1	22	than 50 percent gold and it's an alloy, and then you
23	5	23	go down to 8 karat or 5 karat or something like
24		24	Tiffany is marketing, which is below that 10 karat
_25		25	
	34		36
1	you should pay for it, they associate that with	1	describing them, I mean, just on its face, that
2	karat marks. The reason they associate that with	2	seems very confusing to me. A consumer is going to
3	karat marks is because that's what we've taught	3	be confused that if it's under 10 karat, that it is
4	them.	4	being described one way and if it's over 10 karat,
5	,	5	it's being described a different way.
6		6	If the consumer doesn't understand a karat
7	all converted to metric. Can Americans learn	7	, I ,
8		8	there needs to be a uniform standard that applies
9		9	e
	we're talking about stamping something, I would say	10	MS. REENAH KIM: Regardless of whether
11	6		it's above 10 karat or below 10 karat?
	you have presented with Tiffany, I think most people	12	MR. WAGNER: I think if it goes the
	consider that fine jewelry. What they don't know at	13	answer is yes. I think it if it goes above 10 karat
	this point, because you haven't been allowed to say	14	
	it, is what's in it. And I need to make a decision as to	15	goes down to 5 karat, and it's done as a percentage,
16 17		17	what's the relationship between that and 10 karat? The consumer doesn't know that. The consumer
	think that all of it needs to be disclosed, not just		doesn't understand that. Everyone in this room
10		10	
	nickel in it and I'm sensitive to nickel, I need to	$\begin{vmatrix} 19\\20 \end{vmatrix}$	
	know so that I can make that decision and then make	20	Television, in my opinion, doesn't understand that
21		21 22	distinction.
23		23	MS. REENAH KIM: To what extent might
24	-	24	-
	have, in terms of particularly when you get to this		education help in advancing a general consumer

- 1 understanding of karats versus percentage. And I 2 know we are particularly stuck on the gold products, 3 particularly because karats have been so long 4 traditionally associated with expressing gold 5 content. 6 I'd like to hear from a panel about your 7 ideas and to what extent any disclosures, and in 8 what form they might take, would be necessary to 9 help clarify for the consumer being able to 10 understand and make comparisons between -- if 11 something were to be or if we were to have a 12 universe where certain types of products were 13 described as having, you know, 33 percent gold and 14 other products were being described as 18 karat gold. Cecilia? 15 16 MS. GARDNER: Thanks for asking that again 17 because I wanted to get back to that. And it's a good question because, based on the premise that a 18 19 large part of the universe doesn't understand karat 20 disclosures, you know, how does it help to have two views, two different methodologies? 21 22 And from the perspective of the responders 23 that participated with the JVC, it was very 24 important to maintain these two universes as
- 25 distinct from each other and you have to draw a line

1 as to where these two universes divide and that line

2 is 10 karat gold. So a product that is marketed as

3 10 karat gold, you're finished with your disclosure

4 and you can market it as a piece of 10 karat gold

5 jewelry.

- 1 has a karatage stamped on it and if they look at the
- 2 price, they might make a connection that, because3 the price is relatively high and comparable to
- 4 something that would go for an 18 karat piece, they
- 5 might think that they actually are getting, you
- 5 might think that they actually are getting, you
- 6 know, whatever that value is in the precious metal
- 7 content. And that's something that we do see with
- 8 other products, where if they are able to assemble a
- 9 product that resembles, at least to the
- 10 untrained eye, a higher quality product --
- 11 MS. GARDNER: And for the moment.
- 12 MS. REENAH KIM: -- and if they charge
- 13 those prices, they may be able to get away with a
- 14 consumer being confused. And of course on the back
- 15 end, it becomes -- it's a little messier to try to
- 16 clean up on the back-end than if we were able to try
- $17\;$ to find a way to come up with disclosures in a, you
- 18 know, marking or description system that would help
- 19 clarify that confusion upfront.

1 that information that he has provided and insure 2 that the consumer knows what it is. 3 So our take is a very simple one. 4 Complete disclosure has to be done in advertising, 5 marketing, and it even goes even further. It goes 6 across what we call the 18 inches across the 7 counter. Because they may not see the marketing. 8 They may not -- so it's very important that it is 9 required, when we are below these levels, that the 10 consumer has every opportunity. If it's in a 11 catalog, it should be stated that that's exactly 12 what it is. And that's exactly what they suggest. 13 But they can't control the retailer. 14 In fact, the example I gave earlier, that 15 was a manufacturer, okay? When I talked to him, he 16 said, well it's not our job to go out and see what 17 the retailer is doing. That's what they're calling 18 it in it's legal. And I said, well it's legal, but 19 is it -- and he goes, well, it's probably a little 20 deceiving, but it's still legal. So, I think you 21 have manufacturers trying to --22 MS. LAURA KIM: We call that illegal. MR. LEE: Yes, yes. Manufacturers trying 23 24 to do it the right way, but that the retailer will 25 have to make sure that that is enforced across every

- see a product description that simply says 22
 percent, 44 percent, and 2 percent and they won't be
 able to translate.
- So I'd really like to hear from folks on 4

55 1 we can make that statement, and we do, to our 1 they're getting 1 percent gold, 50 percent silver, 2 consumers. But when you start trying to get in --2 plus other alloys. And I do think that ending plus 3 and you've made a perfect point. When you start 3 other alloys, plus other metals, plus other 4 trying to get into, this has 18 percent boron, it's 4 whatever, that that is a piece of the information 5 got this, that's when you really lose the consumer. 5 that will help the customer fully understand. And 6 And frankly, they don't seem to care at that point. 6 by having one percent gold or whatever, that is also 7 Tell me how much precious metal is in it, I'm smart 7 clear. Because coming from retail, often, you know, 8 enough that I can figure that out, and figure the what is 18 karat? It's 75 percent gold. That is 8 value equation. 9 the natural response and that's generally how we 9 10 MS. REENAH KIM: And just to -- you know, 10 talk to karats. 11 there are provisions in the Guides, as they are 11 So the platinum piece, I'm sorry, I cannot 12 speak to that. written now, relating to certain types of platinum 12 13 alloys where, if you fall below certain thresholds 13 MS. REENAH KIM: Okay. Ewa. 14 and have a particular formulation of different 14 MS. ABRAMS: I can't speak to the platinum 15 platinum group metals, different pure platinum, the 15 piece because we don't sell pieces like that, but I 16 disclosures that you make differ than when you are 16 do have a question as to whether or not we are 17 above certain levels. I don't want to get into all 17 interested in developing a standard for disclosure 18 where an allow contains only one precious element, 18 the numbers here, because we all know it's pretty 19 like gold. So to say, this product contains 33 19 detailed. But the general principal being, when you 20 fall below certain thresholds, you provide a listing 20 percent gold and other base metals, or whether we 21 of all the different, essentially all of the 21 are interested in finding a standard for an alloy 22 different metals. And in addition, you provide 22 that contains more than one precious metal. Because 23 disclosure, essentially indicating that this product 23 I think we develop a more kind of confusing 24 may not, for lack of a better word, perform in the 24 situation and standard where we are allowing for 25 this type of disclosure, this percentage disclosure, 25 same way you would expect a product that is higher 54 56 1 platinum content. 1 when there is only one precious metal. Then it is 2 sort of fighting, let's say for example, gold. This MR. LEE: That's an excellent point. 2 3 MS. REENAH KIM: And my question is, you 3 item contains 20 percent gold and other base metals. 4 know, those provisions have been out for a few years 4 That sort of --5 now. I'm curious to hear, particularly from people 5 MS. GARDNER: Yeah. 6 on the retail side, how effective has that form of MS. ABRAMS: -- potentially fighting with 6 7 disclosure been, where you're essentially giving the 22whentem cSot5.96 40ceiaik[fieceiaia]-5.96 40TJ8er for one 8 full listing, a listing up to 100 percent, telling 121414 people the full nutritional label, so to speak, and 9 MR. LEE: Yes, th- potentiaTj11.54w5.96 40r3-597(sou 10 then also saying, performance may be different in x, y, and z respects. I'm curious to hear how that's 11 12 been working and whether that would really work in 13 this arena. 14 MS. GARDNER: But isn't that when it's 15 only combined with non-platinum group metals? MS. REENAH KIM: Correct. 16 17 MR. LEE: Yes, that's correct. Cobalt, 18 things like that. 19 MS. REENAH KIM: Susan. 20 MS. KELLY: I think there's an opportunity 21 to do great good and some harm. We need to, I 22 think, be specific to always separate the precious 23 metals and to not add silver, gold, whatever, 24 together for one percentage or number. I think it's 25 very important for the customer to understand if

- FF: Absolutely
- 1 MR. LEE: Absolutely.
- 2 MS. ABRAMS: -- how it --3 MS. GARDNER: Exactly.
- MB. GARDNER: Exaculy.
- 4 MR. MENON: You have a 10 karat white gold
- 5 with three precious metals, palladium -- it will
- 6 have palladium in it, it will have silver in it, and
- 7 it will have gold in it. You are still stamping it
- 8 only 10K.
- 9 MS. GARDNER: 10K, right.
- 10 MR. MENON: So why is it different --
- 11 MS. GARDNER: Because it's below minimum
- 12 thresholds. That's really why.
- 13 MR. LEE: And it's being marketed using
- 14 those precious metals.
- 15 MS. GARDNER: Right.
- 16 MS. REENAH KIM: Okay, just for the
- 17 record, I know this is -- I'm glad we are having
- 18 this discussion. I'm glad that everyone is -- I
- 19 just want to make sure that the court reporter can
- 20 keep up with us, so I want to make sure that we at
- 21 least don't speak over each other.
- 22 MS. GARDNER: Can I speak to your question
- 23 about platinum, if that's still a question in your
- 24 mind?
- 25 MS. REENAH KIM: Sure.

58

1 MS. GARDNER: If it's not, we can move on. 2 MS. REENAH KIM: Go ahead. No, I would 3 like to hear it. 4 MS. GARDNER: Platinum is different. 5 Platinum is special. And the history, you know, of 6 how platinum has been addressed by the Federal Trade 7 Commission and back when we were, you know, dealing 8 with voluntary standard, voluntary product standards. You know, the whole history of how 9 10 platinum has been described into the consumer public 11 is just, frankly, different. 12 And what we were confronting at the time a 13 few years ago when we amended the Guides, is we were 14 being confronted with alloys that combined platinum 15 with non-platinum group metals. So now we were 16 having a new world, like we have today with these 17 below minimal threshold precious metal alloys. You 18 know, we needed to find a way to address that that 19 made sure consumers understood what they were 20 buying, that was usable to the manufacturing 21 community, and that could be explained -- could be 22 easily, or not easily or at least could be handled 23 by retail sales. So the suggestions we made in what 24 we gave to the Federal Trade Commission, in terms of 25 solutions, we felt met all of these concerns.

- And it is our view, or my group's view,
- 2 that this particular suggestion about using
- 3 percentages for below minimal threshold alloys and
- 4 calling out all the precious metals in percentages,
- 5 and then leaving it optional as to whether you do
- 6 the whole cake mix percentages, you know, this meets
- 22 easilferen isndedke e tfTJether auTJinw mmaut usouTJinT

1 MS. REENAH KIM: We are closing in on the 2 15 minute mark and I would like to give folks in the audience an opportunity to chime in. So we have a 3 gentleman in the back row. 4 5 MR. AKKAOUI: Michael Akkaoui from Tannery Industries. Just a few comments about what I've 6 7 heard this morning. 8 First, when you use the word alloy, there 9 is an immediate connection between the word alloy 10 and precious metal. When you get into the base 11 metal world, there is a lot less talk about alloy 12 than it is composition. So the lower you go below 13 that 10 karat benchmark and the closer you get to 14 "costume jewelry" the less conversation there is about the term alloy. And I just want to caution 15 16 about that. 17 Secondly, the lack of disclosure when it 18 comes to multiple metals in a composition, the further down you go below that 10 karat benchmark, 19 20 the closer you get to costume jewelry. And just 21 like the CPSC was battling cadmium and trying to 22 remove that -- when you start getting foreign 23 imports into the subject matter, and you will --24 MS. GARDNER: We already do. 25 MR. AKKAOUI: -- you already do. And the

66

manufacturers in this room are very, very careful to
 test their product --

3 MR. HERSKOVITS: Absolutely.

4 MR. AKKAOUI: -- to make sure that it

5 wears properly and there's corrosion protection, so

6 on and so forth. Again, the further you go down

7 below that 10 karat, the closer you get to costume

8 jewelry, the more that composition is going to

9 become important. And I would argue that perhaps it

10 is even a consumer safety issue at a certain point

11 in time. So I just wanted to throw that out there.

12 MS. REENAH KIM: Ewa.

13 MS. ABRAMS: That's why I think it is

14 important to potentially explore that these

15 standards that we are creating are developed for

	69		71
1	MS. POTEET: Veronica Poteet and I'm a	1	to calculate, you know, how much gold is in it,
2	geologist and I'm associated with the Jeweler's	$\begin{vmatrix} 1\\2 \end{vmatrix}$	which they can easily do by times 0.16 and
3	Ethics Association.	$\begin{vmatrix} 2\\ 3 \end{vmatrix}$	MS. GARDNER: You already lost me.
4	I'm going to sit back down, but I think	$\begin{vmatrix} 3\\4 \end{vmatrix}$	MR. LEE: Yeah, I
5	the precious metals, whether it is silver, gold,		MR. LUSTIGMAN: You can easily you can
6	platinum, you have a percentage of how much precious		calculate how much gold is there if you know the
	metal is in that item. And to me, putting on a		weight. Not only the percentage, but the weight.
8	consumer hat, if there's less than 50 percent		That's the way
9	precious metal in the whole alloy, you know, it's	9	MR. MENON: That's the way the price for
10			each by weight, on the karats. So it's already
11	threshold.	11	calculated in and that's
12	MS. GARDNER: You can't unwind 10K.	12	MR. LUSTIGMAN: No, it's not because I can
13	MS. POTEET: Yeah, I know you can't unwind		I or anyone can pick any number they want for a
	it, but it's just to sort of move on, gold is		price. It doesn't mean it's that much more gold in
	known by karats. And a lot of consumers, if they		it than there is in something else.
	have someone to tell them the difference, they get	16	So if you disclose two ounces, four grams,
17	•••	17	whatever of the precious metal, and that is what it
18	So they know 10 karat, and they see fine		is, that will allow consumers to make a value
19	jewelry, I just think that to do percentages, to put	19	comparison, an easy comparison as to which one to
20	the percentage mark in is really confusing. To do	20	purchase.
21	decimals is great and I've been a big fan of the	21	MR. REENAH KIM: Thank you. I do want to
22	metric system my whole life as a scientist, so.	22	we have about five minutes left and there are a
23	But we're not getting there in this	23	couple of people who have been waiting patiently and
24	country. We are not going to get there, but we do	24	I want to make sure that I get to them. Mr. Hanna
25	with platinum, so that's a step, but all of this is	25	and then
	70		72
1	in karats, so	1	MR. HANNA: I'm Mark Hanna from Richline.
2	MS. BROOKS-PIKE: So we can learn.	2	I'm sitting back down, too. Just one point and one
3	MS. POTEET: We can learn, but karats goes	3	question.
4	way back and I just think that, you know, I don't	4	We have now, within the Guides, something
5	see a problem with saying 6 karats. I really don't.	5	called indistinguishable. It's quite a well-used
6	MS. GARDNER: Well, we have to disagree.	6	
7	MS. POTEET: It has to be enough to make		being gold and silver I'd like to see this
8	it a fine piece of jewelry. Because if it's just	8	harmonized with what we are talking about now. I
9	like 1 karat of gold and then the rest is base	9	think that it's dealing with basically the same
10	metals, that's costume.		issue. We are not allowed to say sterling silver
11	MS. REENAH KIM: We have a gentleman in	11	plus 14 karat gold if, in fact, that's what the
12	the middle row who has been waiting.	12	product is made of.
13	MR. LUSTIGMAN: Hi. Sheldon Lustigman, I	13	MS. GARDNER: That's the next panel.
14		14	MR. HANNA: No, it's not.
15	I think the percentage that you are	15	MS. BROOKS-PIKE: Full disclosure is
16	raising is good, to a point, but I don't think it's	16	always best and that's the intent of the Guides. If
17	enough. I think the consumer needs to understand	17	we have any opportunity and I'll be really quick.
18	how much is in it so that you want to disclose not	18	I think that both the Yellora and is it
19	only the percentage, however you do it, by decimals	19	Rubido or Rubado, Rubado, were harmed by the current
20	e	20	Guides. And I think that additionally, it caused
21	So if you are comparing, for example, two	21	you to use a term of a new metal, which it isn't.
22	ingots, one made of 10 karat gold and another one of		It is a new alloy. There was nothing new on the
23 24	18 karat gold, if you are comparing 4 ounces of the 10 karat gold versus 2 ounces of 18 karat, for the	23 24	periodic table. So actually, it almost put you in a
	consumer to understand which is worth more, he needs		position of doing something that could be
25			

1 misleading. You know what I mean? Right, yeah. 2 It's a new alloy. 3 So they need to be able to say, they've 4 got a great product. They've got a great product, 5 we need to know what's in it so we can make our 6 decision as buyers to choose what we want to spend. 7 MR. HANNA: And my question was that, 8 using this percentage basis, so what 4 percent gold, that's also 10 percent 10 karat gold, are we 9 10 excluding the ability to talk about the percentage of the karats entirely by this? 11 12 MS. GARDNER: No. 13 MR. HANNA: Or are we allowing that as 14 part of the description, as long as we're disclosing the percentage of fine gold? 15 MS. GARDNER: The suggestion that we're 16 17 making is that, as a minimum requirement, you can always do more, that you have to say the percentage 18 of the precious metal, whether it is silver --19 20 MR. HANNA: As a parentage --MS. GARDNER: -- alone, whether it's gold, 21 22 as a percentage. 23 MR. HANNA: Of fine gold, okay. 24 MS. GARDNER: Mm-hmm. But one other point 25 I want to make also. You know, it is standard

20 (Pages 77 to 80)

PANEL TWO

MS. KOSS: I think we'll get started. I'm assuming that the panel name tents are the ones that we have sitting here and we haven't left the other ones.

7 Again, my name is Laura Koss with the

8 Federal Trade Commission. Thanks for sticking with

9 us today. Now, we are moving on to panel number two

10 which focuses on issues concerning the surface layer

11 application of precious metals on products. As I'm

12 sure you know, the current Guides discuss certain

13 aspects of certain surface applications for gold,

14 for vermeil and, to a more limited extent, for

15 silver. And they advise that surface platings be of

16 such thickness and extent of surface coverage that

17 reasonable durability is assured or that all

	how to create products that meet standards for these		is not surface-plated.
2	words. We have consumers who have some knowledge	2	MS. FLAMM: Well, those the questions
3	about them, in the very complex context. And I say	3	1 5 5 5
4	that because we are talking about two different	4	said they have familiarity, I think, was the way the
5	processes of creating an application of precious	5	question was phrased. They had some familiarity
6	metal. And I understand your point, and it is	6	
7	well-taken, consumers aren't so interested in the	7	terms useful. Those were the questions that were
8	fact that there are two processes, but there are.	8	asked. Exactly, you know, if we were to ask
9	They perform, you know, different experiences in	9	follow-up questions or dig down, what we would find
10	how they perform, how much metal is required, given	10	out, I couldn't really tell you. But it does
11	the process.	11	indicate to us that we are starting somewhere with
12	And also, now that we are living in a	12	keeping those terms.
13	world where it is not just gold that is the primary	13	MS. KOSS: Okay. And I'd like to hear a
14	precious metal used to create a surface layer	14	retailer's perspective, so I'm going to start with
15	application, but we are in a world now where many	15	you, Susan. If you could tell me a little bit about
16	other precious metals are used, including silver and	16	whether QVC has any insights, in terms of marketing
17	the platinum group metals.	17	these products to consumers, and how you emphasize
18	So we have sort of this complex	18	or whether you emphasize a difference between the
19	environment. We have two processes, we have several	19	electrolytic applications or the mechanical
20	precious metals that perform differently. Wear	20	applications or whether consumers even ask or care
21	tests show that they should be different amounts	21	about the minimum thresholds, et cetera.
22	are required to create a durable product to meet	22	MS. KELLY: That's great. Thank you for
23	consumer expectations. I mean, what consumers do	23	asking. We, right now in our product mix, have
24	expect, and research has shown, I think, as Reenah	24	plated, electroplated products, using the
25	pointed out, they do expect certain product	25	electrolytic method.
	82		84
1		1	
1	attributes, once you identify products as having a		We had very little mechanical joined
2		1 7	provide motals. Occasionally we will have the
	precious metal. They expect durability to some	$\begin{vmatrix} 2 \\ 2 \end{vmatrix}$	precious metals. Occasionally we will have the
3	extent, to a large extent, and they expect tarnish	$\begin{vmatrix} 2\\ 3\\ 4 \end{vmatrix}$	1/20th, 14 karat gold-filled chain. That's a very,
3 4	extent, to a large extent, and they expect tarnish resistance. So they do expect that.	2 3 4 5	1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product.
3 4 5	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals,	5	1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very
3 4 5	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals,	5	1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product.We have, in our descriptions, felt it very important to explain that we are plating, meaning
3 4 5 6 7	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some	5 6 7	1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product.
3 4 5 6 7 8	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to	5 6 7 8	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we
3 4 5 6 7 8 9	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the	5 6 7 8 9	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses
3 4 5 6 7 8 9 10	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different	5 6 7 8 9 10	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to
3 4 5 6 7 8 9 10	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our	5 6 7 8 9 10 11	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals
3 4 5 6 7 8 9 10 11 12	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the	5 6 7 8 9 10 11 12	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that.
3 4 5 6 7 8 9 10 11 12 13	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the	5 6 7 8 9 10 11 12 13	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that.
3 4 5 6 7 8 9 10 11 12 13 14	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level	5 6 7 8 9 10 11 12 13 14	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a
3 4 5 6 7 8 9 10 11 12 13 14 15	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big	5 6 7 8 9 10 11 12 13 14 15	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I
3 4 5 6 7 8 9 10 11 12 13 14 15 16	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed	5 6 7 8 9 10 11 12 13 14 15 16	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address	5 6 7 8 9 10 11 12 13 14 15 16 17	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product has been monitored by our company. The types of
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address what's a complex environment.	5 6 7 8 9 10 11 12 13 14 15 16 17 18	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product has been monitored by our company. The types of applications we have used are thick enough to
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address what's a complex environment. MS. KOSS: So just one point of	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product has been monitored by our company. The types of applications we have used are thick enough to provide the durability that our customers are
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address what's a complex environment. MS. KOSS: So just one point of clarification. You said that the consumer	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product has been monitored by our company. The types of applications we have used are thick enough to provide the durability that our customers are expecting, as reflected in our repeated business for
$\begin{array}{c} 3\\ 4\\ 5\\ 6\\ 7\\ 8\\ 9\\ 10\\ 11\\ 12\\ 13\\ 14\\ 15\\ 16\\ 17\\ 18\\ 19\\ 20\\ 21\\ \end{array}$	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address what's a complex environment. MS. KOSS: So just one point of clarification. You said that the consumer perception indicates that consumers have a baseline	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 1/20th, 14 karat gold-filled chain. That's a very, very small mix in our product. We have, in our descriptions, felt it very important to explain that we are plating, meaning the process, 18 karat gold onto a sterling product. We have brand names that use the word "clad." And we came up with our own rather heavy duty thicknesses that we require our vendors to supply in order to use that term. And I see it on a list of proposals and I'd like to get back to that. But in terms of our customers questioning thicknesses or anything very specific about a product, that's not something that's happened. I think if the my conclusion is that our product has been monitored by our company. The types of applications we have used are thick enough to provide the durability that our customers are expecting, as reflected in our repeated business for brands that are very strong, the plated brands, the
$\begin{array}{c} 3\\ 4\\ 5\\ 6\\ 7\\ 8\\ 9\\ 10\\ 11\\ 12\\ 13\\ 14\\ 15\\ 16\\ 17\\ 18\\ 19\\ 20\\ 21\\ 22\end{array}$	extent, to a large extent, and they expect tarnish resistance. So they do expect that. We have these variety of precious metals, we have two ways of applying those precious metals, we have a baseline of consumer understanding, some understanding, we have efforts in the industry to enlarge that understanding while educating on the differences between processes and what different terms mean. So to us, as you know from our submission, we recommended keeping eleven of the terms, creating standards for them, allowing the industry to use those terms, create that level playing field in the industry, and then the big piece, of course, is consumer education. It seemed a very good place to start and a good way to address what's a complex environment. MS. KOSS: So just one point of clarification. You said that the consumer perception indicates that consumers have a baseline understanding of these terms, but does that mean	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 1/20th, 14 karat gold-filled chain. 	85	8	87
1	are, provided guidance for us and our manufacturers,	1 made initially that those terms are out there.	
2	but in addition to that, we worked with the term	2 Retailers use them, we heard them, and the FTC could	1
3	"plated" and upped the ante a good amount in terms	3 just do a huge service to consumers and the industry	
4	of thickness in order to use our brand name,	4 by saying, okay, this is what these terms mean.	
5	platinum clad or 18 karat clad. And we published	5 MS. KOSS: Okay. And quick question for	
6	this in our guidelines to our vendors and it is	6 you, Suzan. You mentioned clad as a term that	
7	easily compared to the FTC requirements. So we are	7 you're not sure how people are using it. But JVC,	
8	running a good amount thicker for the platinum clad	8 in particular, refers to it as a mechanical	
9	and epiphany clad and it is performing well.	9 application, is that correct?	
10	MS. KOSS: And Pam, what about you and	10 MS. FLAMM: Yes. Our understanding is	
11	your experience with JCPenney?	11 that that is the majority used, but it has come to	
12	MS. MORTENSEN: I agree with Sue that the	12 my attention that that is not the exclusive use of	
13	customer really does not understand plating.	13 the term.	
14	They're not asking that. What they do understand is	14 MS. KOSS: And is that, the fact that you	
15	the durability when it doesn't perform.	15 have tied it to mechanical, what does that are	
16	So what happens is, if you don't have the	16 you basing that on the fact that that is industry	
17	proper amount of plating on a product, you'll get it	17 standard or that's how consumers understand that to	
18	back. So I mean, that's one of the things that, as	18 be mechanical application?	
19	a retailer, for the consumer you want to offer them	19 MS. FLAMM: We believe that is the	
20	the best product that you can.	20 predominant use of the word in the industry reflects	
21	But I do feel that there's like an uneven	21 mechanical. And we believe, from the consumer	
22	playing field. Because plated goods have, as you	22 research that we did and which you have, that	
23	know, can have a variety of coatings, the level of	23 consumers say that they are familiar with it, to	
24	plating. So what they might see as plated at	24 some extent are familiar with the term. Not an	
_25	another retailer versus QVC, which has higher	25 overwhelming extent, but to some extent are familiar	
	86	8	88
1	standards, there's really no standard to the	1 with the term and to some extent find it to be	
2	customer to allow them to know what they're getting.	2 useful. So those are the three points.	
3	MS. KOSS: Mm-hmm.	3 MS. KOSS: And not to pick on you	
4	MS. FLAMM: I wonder if I might add just	4 MS. FLAMM: That's okay.	
5	one thing, it reminds me of a point I should have	5 MS. KOSS: but one more follow-up	
6	made earlier, if that's okay.		
7	MS. KOSS: Sure.		
8	MS. FLAMM: We just heard two retailers		
9	use two of those terms, clad and plated, which		
10	speaks to the point that those words are out there,		
11	consumers are hearing them, the industry uses them.		
12	And yet I don't know if they mean the same thing		
13	when they say those words. I don't know if anyone		
14	at this table means the same thing when they say		
15	those words.		
16	Someone could say, for instance, platinum		
17	clad and could mean a product with a certain amount		
18	of platinum on it that has been mechanically		
19 20	applied. Someone else at this table can use that		
20	same word to mean a certain amount of platinum that		
21	has been electrolytically applied and they could be talking about a difference in the amount of metal,		
22			
22	-		
23 24	precious metal, that could be three times as much as		
23 24 25	-		

- 89
- 1 consumers will catch up with the way the industry is
- 2 using it and because these products are becoming3 marketed. So in other words, the products that are
- 4 marketed as 1/20th, which is, you know, a lot of
- 5 precious metal, that's a lot of precious metal in
- 6 the world of these surface layer application
- 7 products. 1/20th is a lot.

1 the clarity intention than separating them would be. 2 MS. KOSS: When you talk about confusion, 3 are you referring to consumer confusion or are you 4 talking about confusion in the industry? MR. HANNA: Overall confusion. If you are 5 6 talking 1/20th by weight when you are talking about 7 a gold-filled product and you are talking about 0.5 8 micro when you are talking about electrolytic, how does those relate to each other? Does anyone really 9 10 understand that? 11 MS. KOSS: Right. And yet in the comment, 12 and I think it was the JVC Sterling Richline 13 comment, you are now -- or the latest comment from 14 JVC talks about instead of having the weight 15 disclosure, you are now saying that based on 16 durability testing, you would use a 4.32 micron 17 standard. And yet you are still retaining the 18 1/20th, the standard based on industry use. 19 There's a little bit of confusion there on 20 our part, because you are saying that this is a new 21 standard that marketers should use based on

- 1 In terms of the plating, we have the
- 2 electroplate, the plated, the heavy gold
- 3 electroplate and that is where QVC has placed the
- 4 word clad. And the clad objects were very carefully
- 5 looked at in terms of, yes, the material and the

6 thickness for the performay99 reterfor theu of, additio, yo6 t7ickness foat, it wthemay9typeatinitem.6 t8 In term

		1	
	101		103
1	but what they do do is try to equate, okay, this	1	for two reasons.
2	many hours in a wear test equates to this many	2	For one, to ensure that the consumer had a
3	months of use, given common consumer use of a	3	clear protection in terms of intrinsic value of the
4	product. That is, you have it on your finger,	4	metal. Meaning that if the mechanically bonded
5	you're washing dishes, you're gardening, that's the	5	material wore off quicker than electrolytically-plated
6	equation that's used. And it did seem to make a lot	6	material, they would lose intrinsic value. And that's
7	of common sense and it seemed like a good place to	7	something that we believe is important to the customer.
8	try to come up with a baseline.	8	It is very similar to the last discussion about mixed
9	Because it does seem that it's very	9	· · · · · · · · · · · · · · ·
10	important that there be some standard below which	10	
11	consumers are told, hey, you know, durability here	11	Secondly, we wanted to see if there was a
	is just not great.	12	•
13	MS. KOSS: Mm-hmm.	13	
14	MS. FLAMM: And it seemed that that seems		consumer had something that wasn't necessarily
15	to be the best place to pen that standard to it, was		viable. Now viable is sort of ambiguous. What you
16	the thickness.		might think still looks good might not look good to
17	MS. KOSS: Dee.	17	someone else, so we had to try to build some
18	MS. MERINO: I guess I'm a bit confused	18	-
19	and need some clarification as what you guys are	19	
20	defining as durability. Is it, is it going to	$\begin{vmatrix} 1 \\ 20 \end{vmatrix}$	What we didn't do is we didn't make a
20	tarnish? Because sterling silver is going to	$\begin{vmatrix} 20\\21 \end{vmatrix}$	
	tarnish no matter I mean, if it's pure silver it	$\begin{vmatrix} 21\\22 \end{vmatrix}$	So would the consumer have this piece of jewelry for
23	is going to tarnish instantly. So if tarnishing is		five years, based on the rate of wear, or ten years?
	your definition of durability, you can use defining		I think what Michael did, and he did it very well,
	the millimeters of plating to say that that is going		was he tried to build a correlation between the two
	102		104
1	to improve it or not.		and said, I believe, based on my professional
2	And the other thing is, the consumer's	$\begin{vmatrix} 2 \\ 2 \end{vmatrix}$	experience and all the analysis that we did, that
3	expectation as to how long is it going to take	3	this rate of wear equates to one year of use in the
4	before that item does what's the wearability. Is	4	
5	it going to take six months for it to wear through	5	MR. AKKAOUI: If I could comment on that?
6	the plating? Is it going to take a year? Is it	6	MS. KOSS: Sure.
7	supposed to last five years? And unfortunately, I		MR. AKKAOUI: If you jump back first to
8	think that relates to and I think maybe it was	8	your earlier question about clear coats and other
	Lisa that commented, that relates to the value of	9	factors of wear.
	the item and how much the consumer paid for that	10	MS. KOSS: Mm-hmm.
11		11	MR. AKKAOUI: There are plenty of factors
12	And I know we don't want to talk about		of wear, they'll make your head spin. But in
13	cost and price, but a lot of these goods that we are	13	
14	talking about today, that are plated with sterling		has less than the recommended benchmark for gold,
	silver or plated with gold over a base metal, it's		let's say 3 micro inches of gold versus 7, similar
	priced at price points that are eight dollars or ten	I	to what the Europeans did when they were determining
17	dollars or twelve dollars or fifteen dollars. I	17	
18	don't know that the consumer expects that item to		you needed to test that product without the
	last for three years before the plating wears off.		clear-coat. Because you can encapsulate a product
20			and have it pass the nickel-free test.
21	is only saying that durability has to compete with	21	So the mandate there was, you have to take
22	the level of fine jewelry durability.	22	the clear-coat off and then test it. And if it
23	MR. CLAPPROOD: If I could speak to that	23	
24	if I could? The testing that we did was based on	24	good product.

24If I could? The testing that we did was based on2425comparing electrolytic plating to mechanical bonding25

It's a similar thing. Clear-coats are not

1 very good. They wear off, depending on how they are 2 applied, they are adding just marginal protection to 3 the product. So the guidelines, I believe, provide 4 a baseline of a guaranteed performance when you set 5 a benchmark at 7 micro inches or higher, for gold in 6 particular, these benchmarks are, I think, highly critical. Because you can't assure yourself that 7 8 the clear-coat that is used across the world is 9 going to be of any certain quality. So I think that 10 distinction is very, very important. 11 The wear testing that we did, to answer 12 Dee's question, was not for tarnishing. The world 13 of silver and silver-plating is constantly battling 14 with the idea of why does silver tarnish and how can 15 we prevent it from tarnishing? How do we get it 16 from the shelf and then to the consumer without 17 tarnishing? It's an old debate and that's not what 18 we did. We did our testing based on, at what point does it get to a metal that the consumer doesn't 19 20 want to see? 21 So if it's over nickel, how long does it 22 take to get to that nickel, and/or if it is over 23 something else, copper for instance or palladium. 24 So our testing was really trying to 25 determine a baseline Taber testing, which is used

106

1 across a multitude of industries. Taber testing is

2 like the test for wearability in almost any industry

3 that you go into. So we worked with Taber to

4 determine what's the weight of a touch. Basically,

5 if we can define what the weight of a touch is,

6 okay, then we can calibrate the Taber test to mimic

7 normal wear. Not abusive wear, but normal wear.

8 And so we did that. We did some research.

	113		115
1	calibrate an x-ray fluorescence machine properly, to	1	And I haven't seen any negative trends for
	read the difference between 10 karat and 23 karat.	2	• •
3		3	and up.
4		4	MS. KOSS: And Pam?
5	product every day to read, I have no idea if it is	5	MS. MORTENSEN: We do the same thing. We
6	10 karat or 23 karat.	6	always distinguish the karatage, 14 karat or 18
7	MS. KOSS: Mm-hmm, right. Now Susan, I	7	karat, before the plating.
8	want to hear first from Susan and then Pam, you	8	And I do not think the I think the
9	next. I want to hear that, in terms of marketing	9	consumer thinks that 18 karat is better than 14
10	and whether how you are communicating to	10	karat. I think that they understand that.
11	consumers, what is your approach when you do have an	11	But what Dee talked about, I mean there is
12	alloy that is, you know, less than 10 karats or less	12	product, we sell, open sell, product on the floor
13	than 22 karats? Have you made any disclosures? Has	13	that is opening price point. I mean, we sell
14	there been a consumer problem? Have you received	14	product that is under glass that is a higher price
15	consumer complaints when the alloy you know,	15	point. They have different plating microns, might
16	because of tarnishing? I'm just curious about your	16	it be 0.5 micron for the open sell, because it is,
17	experience as retailers.	17	you know, the expectation of the customer is that it
18	But I'm going to start with Susan, since	18	does not have the longevity of what they are going
19	you had your hand up.	19	to find in the fine jewelry department.
20	MS. KELLY: I want to first mention that	20	So there is a difference in the thickness
21	our product, at this time, does not include anything	21	
22	lower than 14 karat, so I'm not familiar with the	22	1 0
23	C	23	MS. KOSS: Okay. So I want to touch on,
24	But I can say that we apply a thickness		you mentioned, Susan, the equivalency issue. So for
_25	if we were applying a thickness of a 24 or 23.5	25	gold electrolytic plating applications, is there an
	114		116
1	karat plate, our understanding is that to name the	1	impact on performance and quality of the product, if
	product as plated gold, it would need to be 0.5	2	a manufacturer uses a thicker amount of lower
3	micron. But if we cut the karatage of the gold in	3	fineness gold on a product rather than a thinner
4	half to 12 karat, we would need to plate one full	4	product of higher fineness gold? Because the Guide
5	micron thickness in order to meet the FTC	5	refers to achieving an equivalent amount of, what is
6	requirements. That's a footnote that refers to the	6	it, 0.175 microns. So is that an issue? And I
7	fine gold equivalency, so	7	think, Michael, you want to it seems like you
8	MS. KOSS: Yeah, I'm going to get to that.	8	want to speak to that.
9	MS. KELLY: Okay.	9	MR. AKKAOUI: Well, I don't think that the
10	MS. KOSS: I'm going to get to that in a	10	
11	minute.	11	with you. And I don't think that, in general, people
12	MS. KELLY: So we do that. But in terms		understand that if you change the karat and let's
13	of marketing the value we, in our descriptions,	13	· · · · · · · · · · · · · · · · · · ·
14			is because the price of gold has sky-rocketed.
15	1 6 5		Prior to that, there was a very even playing field.
16	MS. KOSS: But do consumers understand,	16	
17	when you provide that number, what that means?	17	
18	MS. KELLY: I can't you know, no		low karat was the watch industry. They would use
19	·	19	200 millionths of an inch of low karat and 200 millionths of an inch of high karat because they
	understand the difference between 14 karat gold	$\begin{vmatrix} 20\\21 \end{vmatrix}$	millionths of an inch of high karat, because they understood the bleed-out issue.
	plate and 18 karat gold plate. And by the longevity	$\begin{vmatrix} 21\\ 22 \end{vmatrix}$	
22			So you know, that's where this issue has come. It has come because of the market price of
23 24	that it is meeting their needs. But finer definitions or finer data to the customer, we	23 24	-
	haven't shared it.		about the equivalency, I'm not sure that that's well
<i>∠</i> J	וומיטוו ג אומולט וג.	² J	about the equivalency, I in not sure that that's well

1 because we use him sometimes.

2 MS. KOSS: Yes, Michael. 3 MR. AKKAOUI: Our study incorporated silver as well. And to our surprise, and I'll say 4 5 this admittedly, that we found that 40 micro inches of silver plate actually wore better than 6 anticipated. 7 8 If you look in our exhibit, you'll find a chart that includes this information. We compared 9 one hundred millionths, or 2.5 microns of silver 10 plate, to one micron or 40 millionths of silver 11 12 plate and found, in comparison, to look at the other 13 metals that we were defining benchmarks for, that 14 the silver, pure silver plate, this is 39 silver 15 deposit, went 6,000 cycles on the linear Taber test, 16 which we were quite impressed with. 17 So you know, from my just personal perspective, I wouldn't have a problem lowering our 18 benchmark that has been recommended to the 40, as it 19 did perform, again, relative to the other metals 20 21 that we tested, relatively well at that benchmark. 22 MS. KOSS: Okay. Just so I understand 23 what you're saying, based on further testing -- in 24 other words, that recommendation isn't incorporated 25 in the declaration that you submitted with the --

122

1 MR. AKKAOUI: We recommended one hundred 2 millionths of an inch or 2.5 microns. 3 MS. KOSS: Uh-huh. 4 MR. AKKAOUI: But this test data is being 5 done at basically the same time that the recommendations were being formulated. And I was 6 obviously very comfortable in keeping with the 100 7 8 micro inch recommendation. The value on a pot of 9 that much more silver, at least for me, was not that 10 much more significant so we kind of left it at 100. But the test data at 40 was actually pretty good. 11 12 MS. KOSS: Do you plan to submit that 13 additional testing on the public record? 14 MR. AKKAOUI: Well, it is currently on the 15 --16 MS. KOSS: Okay, all right. MR. AKKAOUI: -- in what you have, yes. 17 18 MS. KOSS: So now I want to move on to a 19 discussion that is more specifically focused on 20 disclosures about lack of durability. And I know 21 that the JVC task force comment talked about using 22 the eleven terms, if you meet a threshold. And if 23 it's below the threshold, there could be a 24 disclosure about durability is not assured. So I'm wondering about -- and I think I 25

- 1 precious metal and you've now triggered expectations
- 2 in a consumer's mind about durability. You are
- 3 going to have to tell them that durability is not
- 4 assured.
- 5 If they choose not to reference the
- 6 precious metal, then they certainly don't say
- 7 anything. And certainly nothing we are recommending
- 8 would prevent any manufacturer or seller from
- 9 selling these products. It's just about letting
- 10 consumers know -- you hear the word gold and you're
- 11 thinking certain things, while it may not perform
- 12 within your expectations.
- 13 MS. KOSS: So Susan, you mentioned
- 14 disclosing special care requirements.
- 15 MS. KELLY: Mm-hmm.
- 16 MS. KOSS: And I'm just wondering if you
- 17 can elaborate on how, whether you believe there are
- 18 sufficient to cure any consumer deception. Are the
- 19 care requirements or that kind of information
- 20 enough?
- 21 MS. KELLY: My feeling is that it is
- 22 giving a level playing field. If we feel that any

23 plateis

22can elaborataommthe

1 understand those terms?

2 MS. KELLY: I believe it is very clearly 3 understood. We apply those terms only to costume 4 jewelry brands that are well-defined and they are 5 not mixed in with fine gold or precious metal items. MS. MORTENSEN: I would agree with Sue on 6 7 that because we also carry costume jewelry that is 8 goldtone or silvertone and I think that we try to distinguish between the two. Whenever we talk about 9 gold, it is really gold. We put a karat in the 10 11 front of it. 12 MS. KOSS: So that, I think, is another 13 good transition to what I want to focus on, and 14 that's all of the other terms that we've left out. 15 You know, we've talked specifically about rolled

16 gold plate, about the fill, to a certain degree, but

MS. KOSS: Even without any kind of a

1 MS. KOSS: Suzan. 2 MS. FLAMM: To return to your question 3 about certain terms, duragold, durigold, washed and 4 referencing some of the terms that we are suggesting 5 no longer need to be addressed specifically by the 6 Guides, it really goes back to our effort to, not 7 only unify the sections in the Guides that address 8 precious metal applications, that is to make them 9 global so that they address all of the precious metals, but also to the extent possible, given the 10 11 complexity of these products, to simplify. 12 And so that was a process of determining 13 which terms really were essential, which terms were 14 consumers being educated on, which terms should they be educated on, and which terms were really no 15 16 longer being used or necessary to define. So that's 17 the duragold/durigold. I'm in the industry over 18 five years and I didn't know what those meant. 19 Moreover, no one in my office knew what they meant. 20 And it seemed like we really don't need those. We 21 don't need to burn into the Guides, and in consumers 22 -- no one is out there trying to educate consumers 23 about what those words mean. 24 MS. KOSS: Right. 25 MS. FLAMM: Those can go. In terms of

134

1 gold flash and gold wash, any manufacturer or seller 2 is welcome to use those terms, but since the way -what those products are today are generally, 3 4 products described with those terms are going to be 5 below those minimums that we recommend, they are going to need a -- or we suggest that there be a 6 7 disclosure made about durability. It seemed that 8 those were not necessary to define in the Guides 9 specifically, but they are not words that -- since 10 they would be accompanied by the disclosure, as they are currently used. 11 12 So that was all part of our effort to --13 which words do we currently need here? How can we really make an effort to -- these products are big in 14 15 the marketplace, consumers want them, sellers are able to reach price points they want to reach by 16 selling them, it's all a good thing. But how can we 17 18 protect consumers and how can we make this a little 19 simpler for everybody, especially for consumers, and 20 then start educating them as to what this stuff is. 21 MS. KOSS: Okay. I want to make sure I 22 heard you correctly, because currently the Guides state that you can state gold flashed or gold 23 24 washed, even if you are below the threshold. MS. FLAMM: Yes. 25

	149		151
1	that need to be disclosed?	1	MR. AKKAOUI: I think the clarification is
2	MS. FLAMM: We don't take the position	2	that the discussion that we just had is very
3	that you know, our position starts like this. If	3	specific to white gold.
4	you reference precious metal plating then all of	4	MS. KOSS: Mm-hmm.
5	this stuff has to happen. You have to use different	5	MR. AKKAOUI: It's not about rhodium, it's
6	words, you should use certain defined terms then,	6	about white gold.
7	and you have to give a warning that durability is	7	MS. MORTENSEN: Yeah.
8	not assured.	8	MS. KOSS: Right.
9	If you choose not to reference the	9	MR. AKKAOUI: It's not about it's about
10	precious metal plating generally, then there's no	10	white gold and the fact that the common practice is
11	requirements. The exception is rhodium plating,	11	to put rhodium over white gold and that once that
	because that's it's just its own animal. I mean,		wears through, you have exposure and you have
	it's not referenced, and yet it is one that really	13	tarnish and so on and so forth.
	should be because it is very prevalent in the	14	MS. FLAMM: Right. You are representing
	industry. If that when that plating comes off,		that you are selling white gold or rhodium
16	the consumer is going to see a yellow or a substrate		plating, and I think rhodium is on platinum as well,
17	underneath and we know that they will be		to create a whiter product?
	disappointed, because we hear from the retailers	18	MS. AKKAOUI: Over just about anything you
19	5 1 5		want.
20	MS. MORTENSEN: I think that the	20	MS. KOSS: So is the
	difference is that we are disclosing that it is	21	MS. MORTENSEN: And when it wears off, it
	plated by saying sterling silver, 14 karat plate or		is not what you bought. It does not look
	14 karat wash. Bridal product, we are not	23	MS. LAURA KIM: I understand. So just to
	disclosing that there is a rhodium plating. It's		clarify, the issue is that the rhodium plating is
_25	just we tag it, it's white gold.	25	something that does wear off, it can be rather
	150 MG MOGG Di Lu Du G		152
1	MS. KOSS: Right. But Suzan, your		inexpensively replated, and that it is not disclosed
2	position would be, or JVCs position would be that,		that the product is plated with rhodium. And that
3	for rhodium plating, in addition if you are		is certainly true with white gold products.
	saying rhodium plating, if it is below the threshold	4	MR. AKKAOUI: Right.
	that JVC has suggested, then not only do you need to	5	MS. LAURA KIM: Is that also true for
	have the disclosure about the reasonable durability isn't insured, or whatever the wording was, you also		other types of products that are plated with
8	would additionally have to disclose the fact that it		rhodium? So in other words, is there a sense that there should be a disclosure of the rhodium plating
9	needs to be replated or retreated?		for white gold products, is that something that is
10	MS. FLAMM: Well, I think	9 10	necessary to prevent consumer deception in other
11	MS. KOSS: Because that's not the way I	10	for other types of products that are typically
12	understood		plated with rhodium?
13	MS. FLAMM: that that's up to the	13	MR. AKKAOUI: Only when it is marketed as
14	-		something other than a rhodium-plated product.
15	disclosure. And that was not in our recommendation.	15	MS. FLAMM: The way we our suggested
16	MS. KOSS: Okay, I just wanted to clarify.	16	language said rhodium-plating over a precious metal.
17	MS. FLAMM: I'm getting the sense of the	17	Because it is used over platinum as well, for the
18	panel of that and it's striking me as I mean, the	18	same exact purpose, to create a whiter
	way we left was that would cause the beginning of	19	MS. LAURA KIM: I just wanted to clarify
	the conversation about what this plating is and	20	• •
21		21	MR. AKKAOUI: But when it is
22	but an affirmative obligation to say hey, that this	22	MS. FLAMM: It's over
23	is the special care that's needed is striking me as	23	MS. LAURA KIM: Hold on, just one moment.
	something worth consideration.		Just one person at a time. I just wanted to
25	MS. KOSS: Michael, I just	25	clarify, because Michael said the issue was it

10 white gold and the fact that it is being marketed 11 and sold as a white gold item, the consumer is 11 unaware that there is rhodium there to begin with. 13 And I think that's really the point. 14 All plating will wear. All plating will 15 wear on anything, right? But in this particular 16 case, it is because it is white gold, there's a 17 perception that it is going to last, in and of 18 itself, as white gold alone. 19 MS. KOSS: Right. I guess what makes it 20 different is that it is a precious metal over a 11 receious metal, but people don't understand that the 21 for saccuracy in spelling, hyphenation, punctuation and 21 format. 22 MR.
