

THE DISCREPANCY

The discrepancy between the observed and expected results is a measure of the difference between the observed and expected results. It is calculated as the difference between the observed and expected results, divided by the expected result. The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results.

The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results. The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results.

The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results. The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results.

The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results. The discrepancy is a measure of the difference between the observed and expected results, and it is used to determine the significance of the results.
