standard and enable the FTC to protect consumers more effectively.

Using its existing authority, the FTC has devoted substantial resources to encourage companies to make data security a priority. The FTC has brought 50 civil actions against companies that we alleged put consumer data at risk. We have brought these cases under our authority to combat deceptive and unfair commercial practices as well as more targeted laws such as the Gramm-Leach-Bliley Act and the Fair Credit Reporting Act.

In all these cases, the touchstone of the Commission's approach has been reasonableness: A company's data security measures must be reasonable in light of the sensitivity and volume of consumer information it holds, the size and complexity of its data operations, and the cost of available tools to improve security and reduce vulnerabilities. The Commission has made clear that it does not require perfect security and the fact that a breach occurred does not mean that a company has violated the law.

Significantly, a number of FTC enforcement actions have involved large breaches of payment card information. For example, in 2008, the FTC settled allegations that security deficiencies of retailer TJX permitted hackers to obtain information about tens of millions of credit and debit cards. To resolve these allegations, TJX agreed to institute a comprehensive security program and to submit to a series of security audits. At the same time, the Justice Department successfully prosecuted a hacker behind the TJX and other breaches.

As the TJX case illustrates well, the FTC and criminal authorities share complementary goals. FTC actions help ensure, on the front end, that businesses do not put their customers' data at unnecessary risk, while criminal enforcers help ensure that cyber criminals are caught and punished. This dual approach to data security leverages government resources and best serves the interests of consumers, and, to that end, the FTC, the Justice Department and Secret Service

2

have worked together to coordinate our respective data security investigations.

In addition to the Commission's enforcement work, the FTC offers guidance to consumers and businesses. For those consumers affected by recent breaches, the FTC has posted information online about steps they should take to protect themselves. These materials are in addition to the large stable of other FTC resources we have for ID theft victims, including an ID theft hotline. We also engage in extensive policy initiatives on privacy and data security issues. For example, we have recently conducted workshops on mobile security and emerging forms of ID theft, such as child ID theft and senior ID theft.

In closing, I want to thank the Committee for holding this hearing and for the opportunity to provide the Commission's views. Data security is among the Commission's highest priorities, and we look forward to working with Congress on this critical issue.

Thank you.
