Serena Viswanathan
Associate Director

survival rate for those in serious and critical condition is 90% when treated with hyperbarics.

The first case report out of Wuhan that demonstrated successful treatment of critical and severe patients using Hyperbaric Oxygen Therapy (HBOT). With just four to seven treatments lasting 2 hours each at 1.6 ATA of pressure. This team showed drastic lasting improvements in SPO2 and lung functions and ultimate survival of each patient.

'Clinical reports and pathologic anatomic findings shown, progressive hypoxemia is the main cause of deterioration in patients with COVID-19. The mortality rate of critical patients in Wuhan is close to 60%, and we are trying to solve the problem of hypoxia,' Zhong Nanshan said on Feb. 27. HBOT is the strongest non-invasive oxygen therapy. In the early stage, 5 cases of severe and critical patients with COVID-19 were clinically treated, which proved that the long-term excellent clinical effect of using HBOT in treating hypoxia was also applicable to COVID-19 patients. The effect of HBOT is better than breathing atmospheric high flow oxygen and mechanical ventilation techniques. It is suggested that promote HBOT as an oxygen therapy treatment for critically ill patients with COVID-19, which is expected to significantly improve the treatment efficiency, reduce the medical pressure and the risk of infection, and decrease the mortality rate of critical patients. It has practical significance for further accelerating the overall victory of this epidemic, achieving the most effective treatment and realizing infection prevention control'

Zhong Xangling, the director of the Department of Hyperbaric Oxygen in Wuhan Yangtze River Shipping General Hospital

Please see Doctor Harch's explanation [sic] of HBOT for Covid-19:

<https://www.youtube.com/watch?v=zVIRIb1CQ> [link to a video titled HBOT for COVID-19: The Double Standard in Medicine with a description that states Dr. Harch discusses the use of HBOT for COVID-19 infection and shows that there is no reason why doctors cannot deliver HBOT to their dying COVID-19 patients.]
